## WHY "FOXFIRE"?

In July, 2010 the Wallow Fire affected over 530,000 acres of our beautiful White Mountains, and all of our lives. But we and our neighbors are a hardy lot and we can usually find the silver lining in most any cloud. Foxfire is the name given to the bioluminescence that is created by some species of mushrooms. Seen during the day these mushrooms look much like ordinary fungi.

At night, however, fungi such the Honey Mushroom put on an eerily beautiful display that has fascinated folks forever. Benjamin Franklin suggested their use as a light source in the Turtle, an early submarine.

These fungi are said to be more common in areas that have recently experienced a forest fire because of the increased availability of the decaying wood on which they grow.

So, to celebrate the resilience and determination of our neighbors we chose to call our restaurant **FOXFIRE AT ALPINE**.

Something beautiful can come from devastation.
